DONVILLE | KENT asset management inc.

DKAM Capital Ideas Fund LP

Investment Strategy

The DKAM Capital Ideas Fund LP is a North American long/short equity fund investing in growth companies that consistently earn a high ROE. These companies typically have: (i) strong recurring revenues; (ii) minimal leverage; (iii) a defensible competitive advantage; and (iv) outstanding management teams. We have a small cap bias, striving to invest in growth companies early before they mature into larger entities and have their multiples re-evaluated by the investment community. Our short strategy focuses on a basket of companies that rank poorly across select quantitative metrics and serve as partial hedges against our highest systematic exposures.

The DKAM Capital Ideas Fund, employees, writers, and other related parties may hold positions in the securities that are discussed in our newsletters, presentations or on our website.

¹ The S&P/TSX Composite Total Return Index and the S&P 500 Total Return Index ("the indexes") are similar to the DKAM Capital Ideas Fund LP ("the fund") in that both include publicly traded Canadian equities of various market capitalizations across several industries, and reflect both movements in the stock prices as well as reinvestment of dividend income. However there are several differences between the fund and the indexes, as the fund can invest both long and short, can utilize leverage, can take concentrated positions in single equities, and may invest in companies that have smaller market capitalizations than those that are included in the indexes. In addition, the indexes do not include any fees or expenses whereas the fund data presented is net of all fees and expenses.

² The Sharpe Ratio is calculated as the return of the portfolio less the risk-free rate (Rolling 3-Month Canadian T-Bill), divided by the standard deviation of the portfolio's total returns.

³ The Upside Capture Ratio is calculated as the geometric mean return of DKCI's total monthly returns since inception, divided by the geometric mean return of the benchmark's (S&P TSX Composite Total Return Index) monthly returns over the same time period, if and only if the given month's benchmark monthly return is greater than 0%.

⁴ The Downside Capture Ratio is calculated as the geometric mean return of DKCI's total monthly returns since inception, divided by the geometric mean return of the benchmark's (S&P TSX Composite Total Return Index) monthly returns over the same time period, if and only if the given month's benchmark monthly return is less than 0%.

⁵ The Market Capture Ratio is calculated as the Upside Capture Ratio divided by the Downside Capture Ratio.
